Combat Turret System HITFIST-30

Turret is designed to fighting light and medium armored vehicles, including Armoured Personnel Carriers or Infantry Fighting Vehicles and to fighting manpower. It is also possible to fighting hovering and slow flying helicopters.

Turret provides high accuracy of fire with full stabilized gun. It has easy-to-use fire control system with electrical control and day/night fire control system with a thermal camera and eye-safe laser range finder. Turret has a high ballistic protection fulfilling the requirements of STANAG 4569.

It is possible to increase the level of protection through the use of additional armor.

Turret is used by the Polish Armed Forces. The HITFIST - 30P combat turret is a main weapon system of wheeled carriers KTO Rosomak.

As a domestic manufacturer of HITFIST-30P turrets, we also have the ability to conduct inspections, servicing, overhauls and modernization of this system, both warranty and post-warranty.

As part of repair of the turrets damaged during combat operations, it is possible to perform new body of turret, as well as the review and the replacement of damaged parts with new ones. While smaller repair work can be implemented at the user, the full range of repair and upgrading of turrets is carried out in our facilities.
